Course Description: This course introduces the principles, techniques and algorithms for solving machine (resource) scheduling problems of the manufacturing and service systems. The topics covered in this course are overview of terminology, characteristics and classification of scheduling and sequencing problems, an overview of computational complexity theory, single machine, parallel machines, flow shop, job shop, and open shop scheduling problems with various scheduling criteria, dispatching rules, branch-and bound, dynamic programming, local search, and metaheuristic approaches.

Course Objectives: The main aims of this course are:

- to introduce the basic concepts to understand and describe a variety of scheduling problems faced in manufacturing and service systems,
- to introduce the techniques for modeling scheduling problems using appropriate mathematical models of linear and integer programming types, and
- to introduce a comprehensive treatment of the various types of algorithms to solve the scheduling problems.

Learning Outcomes: On successful completion of the course, all students will or will be able to:

- 1. identify basic concepts and issues for scheduling and sequencing problems in manufacturing and service systems,
- 2. capable to use quantitative methods to model, analyze and optimize scheduling and sequencing problems,
- 3. capable to formulate mathematical programming models for solving a variety of scheduling and sequencing problems and have improved their skills in mathematical modeling.
- 4. have skills in using basic mathematical programming and optimization software (such as LINGO, GAMS, CPLEX etc.),
- 5. have skills in report writing.
- 6. search and use databases for scheduling papers,
- 7. involved in teamwork,
- 8. aware of ethical issues.
- Textbook: There is no specific textbook for the course. Students are recommended to obtain a copy of one of the following reference books below:
  - 1. K.R. Baker, D. Trietsch, Principles of Scheduling and Sequencing, Wiley, 2009.
  - 2. J. Blazewicz et al., Scheduling Computer and Manufacturing Processes, Springer-Verlag, 1996.
  - 3. P. Brucker et al., Scheduling Algorithms, Springer-Verlag, 2007.

- 4. J.M. Framinan et al., Manufacturing Scheduling Systems, Springer-Verlag, 2014.
- 5. T.E. Morton, Heuristic scheduling systems: with applications to production systems, Wiley, 1993.
- 6. R. G. Parker, Deterministic Scheduling Theory, Chapman & Hall, 1995.
- 7. M. Pinedo, Scheduling: Theory, Algorithms, and Systems, Prentice Hall, 2008.
- 8. M. Pinedo, and X. Chao, *Operations Scheduling with Applications in Manufacturing and Services*, McGraw-Hill, 1999.
- 9. D. Sule, Industrial Scheduling, PWS Publishing, 1997.

Aside from these books, the University Library has quite a good collection of books on the introductory and advanced level in scheduling, which can be searched at <u>http://www.cankaya.edu.tr</u>.

Course Website: Course-related materials, including the lecture notes, homework assignments, and exam evaluation results, will be uploaded to the course's website at <u>http://webonline.cankaya.edu.tr</u> so that they can be reached anytime.

Course Outline:

| Week | Topic(s)                                                                                                                                                                                                                                 |  |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| 1    | <b>Introduction:</b> Definition of the scheduling problem, notation, three-field representation for scheduling problems, classification of scheduling problems                                                                           |  |
| 2    | <b>Introduction:</b> Equivalency of performance measures, regular and irregular performance measures, complexity theory, classification of solution algorithms, measuring performance of approximation algorithms                        |  |
| 3    | <b>Single machine scheduling problems:</b> Dominant sets, mathematical programming formulations, total flow time minimization, weighted flow time minimization, total lateness minimization                                              |  |
| 4    | <b>Single machine scheduling problems:</b> Maximum lateness and maximum tardiness minimization, number of tardy jobs minimization, total weighted completion time minimization with precedence constraints, dynamic programming approach |  |
| 5    | <b>Single machine scheduling problems:</b> Neighborhood search techniques, dominance properties in total tardiness minimization, branch and bound algorithm for total tardiness minimization                                             |  |
| 6    | <b>Parallel machines scheduling problems:</b> Mathematical programming formulations, list scheduling, makespan minimization, makespan minimization with preemption, mean flow time minimization                                          |  |
| 7    | <b>Parallel machines scheduling problems:</b> Mean flow time minimization with machine availability, uniform and unrelated parallel machines                                                                                             |  |
| 8    | Metaheuristics: Simulated annealing, tabu-search and genetic algorithms                                                                                                                                                                  |  |
| 9    | <b>Flow shop scheduling problems:</b> Permutation schedules, mathematical programming formulations, two-machine makespan minimization, three-machine makespan minimization, branch and bound algorithm for makespan minimization         |  |
| 10   | <b>Flow shop scheduling problems:</b> Heuristics for multiple machines makespan minimization, two-<br>machine total flow time minimization by branch and bound algorithm                                                                 |  |
| 11   | Flow shop scheduling problems: Flow shops with dominating machines, proportionate flow shops, ordered flow shops                                                                                                                         |  |
| 12   | Job shop scheduling problems: Two-machine makespan minimization                                                                                                                                                                          |  |
| 13   | <b>Job shop scheduling problems:</b> Network representation of the job shop problem, disjunctive programming formulation, priority dispatching rules, heuristic algorithms for makespan minimization                                     |  |
| 14   | <b>Open shop scheduling problems:</b> Two-machine makespan minimization, multiple machines makespan minimization.                                                                                                                        |  |

- Lectures: Each week, there will be three lecture hours. Students are expected to read the material covered in the previous lectures before the new class meeting. If the students come prepared, they will find the lectures more interesting and benefit from the discussion.
- Lecture Notes: Lecture notes will be uploaded to the course's website before the lectures to give the students the chance to take extra notes on the lecture notes.
- Assignments: There will be two types of assignments: Reading and Homework.

Reading Assignments:

ents: From time to time, there will be some reading assignments that will support the lectures. For any examination, students are responsible for studying all assigned readings, even if they might not be discussed in class.

Homework Assignments: There will be **two** homework assignments (1 assignment before the midterm exam and one assignment after the midterm exam) containing discussion questions, and problems, and research study. Homework assignments are crucial in ensuring students understand the material they have learned in lectures.

## Study Team Formation for homework assignments:

- In doing the homework assignments, students should <u>work in teams with</u> three members.
  - It is the student's responsibility to find his/her team members.
  - The composition of the teams cannot be changed throughout the semester. That is, if a team member wants to leave his/her study team for any reason, he/she is **<u>neither</u>** allowed to join another team **<u>nor</u>** work alone.
  - Each study team should complete a <u>single copy</u> of the <u>Study Team Info</u> <u>Form</u> that can be downloaded from the course's website. The student number, name and surname, cellular phone number, and e-mail of each team member should be completed in the form. Incomplete forms are not accepted.
  - **If a student cannot find team members**, he/she should submit the Info Form with his/her information only. Then, it will be assumed that this student accepts to be assigned to a team by the instructor.
  - <u>If two students form a team but are still looking for the third member</u>, they should submit the Info Form with their information only. Then, it will be assumed that they accept that a third member will be assigned to their team, or they can be assigned to different teams by the instructor.
  - The Study Team Info Form should only be completed <u>by one team member</u> and shared with other team members.
  - By October 16, 2024 (Wednesday), 23:30, the electronic file (with the extension <u>doc</u> or <u>docx</u>) of the Study Team Info Form should be uploaded to the course's website by each study team member to confirm their membership in the study team.
  - · In any one of the cases, where
    - the forms uploaded by the team members are different from each other.
    - <u>the forms are incomplete</u>,
    - · all team members have not uploaded the form,

it will be assumed that the team has not been established. Thus, students will be assigned randomly to different teams by the instructor.

## Homework Report Submission:

- Each team should prepare a <u>single written report</u> for each homework assignment.
- The <u>Cover Page for the Homework Reports</u> available on the course's website should be used as the cover page for each homework report.
- If a team member does not participate in the study of a homework assignment, then the other team members have the right <u>not</u> to write his/her name on the Cover Page. Thus, this student's grade from the assignment will be zero.
- Each team is expected to submit an original report, which reflects only the effort of team members. Homework reports should be the team's independent work, which requires independent thought. It is not independent work if the members of different teams work together, or one team derives the answer and then shares that answer with other teams. Likewise, it is not independent work if two teams work alone to derive their answers, compare them, find their mistakes, and then correct them together.
- <u>One of the students in each team</u> should upload the homework reports to the course's website *on* or *before* the due date and time of the assignment.
- · Late submissions of homework reports will not be accepted.
- · There will be no makeup for the homework assignments.

Other details regarding the homework assignments will be given later.

## Computer Access & Usage:

Homework assignments may require the use of MS OFFICE (Word, Excel, and Visio) and the optimization software GAMS to solve mathematical programming models of scheduling problems. It is expected that students have learned to use these software packages in the courses offered in the previous semesters. If not, it is mainly the student's responsibility to learn them. A student may use his/her computer if he/she owns a personal computer. The computers in the Computer Laboratories are available for the students' use. Students should always plan if they rely on the computers in the labs. Increased demand for deadlines of project reports for courses other than IE 474 will reduce the available computer time. Students should also be aware of power failures. Furthermore, students should always be courteous, considerate, and professional while using the university's computer facilities.

| Announcements &<br>Uploads: | Students must regularly check their university e-mail accounts and the course's website for announcements and updates.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Attendance:                 | <ul> <li>Students are expected to attend all lecture hours. Some other information regarding the attendance is as follows:</li> <li>Students are expected to be in class on time. However, <u>a 10-minute delaved entry of the students will be permitted for each lecture hour</u>. If a student has a delay of more than 10 minutes, he/she must wait outside until the break between two consecutive lecture hours is given.</li> <li>Attendance will be taken every lecture hour, according to the requirements of the University's rules and regulations.</li> <li>During every lecture hour, students are responsible for reminding the instructor to take attendance.</li> <li>The instructor will keep students' attendance records.</li> <li>Students' attendance records will be updated at the end of each week and announced at the course's web site before the next week's lecture day.</li> <li><u>The minimum attendance requirement for the whole semester is 50%</u>.</li> <li>Missed lectures with a valid, verifiable, and documented excuse (e.g., medical report approved by Çankaya University Health Center) will be considered for the attendance calculation at the end of semester so that students are responsible to monitor their attendance.</li> <li>If a student misses a lecture, it is the student's responsibility:     <ul> <li>to be informed of course-related activities and the material covered in the missed lecture, and</li> <li>to study all material covered in the missed lecture.</li> </ul> </li> </ul> |  |
| Class participation:        | Class participation does not mean class attendance. Students are expected to participate in class discussions intelligently. Regular class attendance and participation are needed for effective learning and success in this course. However, those students who attend lectures and study regularly will likely benefit greatly and receive marks accordingly.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |
| Academic Misconduct:        | Academic integrity is always expected of all students of Çankaya University, whether in the presence or absence of faculty members. No collaboration of any kind is permitted during the exams. All suspected cases will be treated according to the University's rules and regulations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |
| Honesty Policy:             | All students admitted to Çankaya University should declare his/her understanding and belief in the Honor Code stated by the Department of Industrial Engineering for the examinations and assignments. This statement is a reminder to upload your obligation as a Çankaya University student and to be honest in all work submitted and exams taken in this course.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| Exams:                      | <ul> <li>There will be two exams (midterm and final).</li> <li>Both exams will: <ul> <li>be held in class (i.e., no take-home exam will be given.),</li> <li>have two parts,</li> <li>be closed-notes/closed-book type in the first part of the exam, which has true-false, short-answer, and discussion questions, and</li> <li>be open-notes/closed-book type in the second part of the exam, which has problem-type questions.</li> </ul> </li> <li>The final exam will be non-cumulative (i.e., it covers only the material studied after the midterm exam) and will be scheduled for a day and time in the designated final exam week.</li> <li>In both exams, students may need a hand calculator, which is not programmable.</li> <li>Students should come early on the scheduled exam time because they will be seated according to a list.</li> <li>During the exams, students are <u>not</u> allowed: <ul> <li>To ask any questions.</li> <li>To write anything on the back of each sheet of the exam booklet.</li> <li>To keep cellular phones on the desks.</li> <li>To share other students' belongings such as calculators, erasers, pencils, etc.</li> <li>To use a cellular phone as a calculator.</li> <li>To go out for any purpose (visiting WC, drinking, smoking, etc.). So, they should take all necessary precautions before the exam and may bring their water, biscuits, etc.</li> </ul> </li> </ul>                                                                                                                             |  |
| Makeup Exam Policy:         | <ul> <li>Make-up exam policies are as follows:</li> <li>If a student misses an exam and has a valid, verifiable, and documented excuse (e.g., medical report approved by Çankaya University Health Center) for his/her absence, a make-up exam will be given.</li> <li>There will be no make-up for the make-up exam.</li> <li>A make-up exam format can be different from a regularly scheduled examination.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |
| Objections:                 | Any form of document concerning work, which is to be used by the instructor as the basis of grading, will be shown to the student upon request. Students who feel they received improper grades have the right to a formal appeal. The objection to any grade must be made to the instructor within ten days after the grades are announced.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |

Assessment Items: The following percentages give the relative importance of various assessment tools.

| Assessment Item      | Marked Out of | Weight (%) |
|----------------------|---------------|------------|
| Homework Assignments | 100           | 2 ′ 15     |
| Midterm Exam         | 100           | 35         |
| Final Exam           | 100           | 35         |
| TOTAL                | 100           |            |

Note that the instructor reserves the right to modify these percentages if he deems it necessary.

Grade Improvement: The semester letter grade will only be determined based on the required work listed above and cannot be improved with additional work.

Grading Policy: <u>Semester letter grades for the Undergraduate and Graduate Programs students</u> will be assigned using the standard scales (i.e., catalog grading system described in Çankaya University regulations) below.

| UNDERGRADUATE AND GRADUATE STUDENTS |             |                 |  |
|-------------------------------------|-------------|-----------------|--|
| Letter grade                        | Coefficient | Score Intervals |  |
| AA                                  | 4.00        | 90-100          |  |
| BA                                  | 3.50        | 85-89           |  |
| BB                                  | 3.00        | 80-84           |  |
| CB                                  | 2.50        | 70-79           |  |
| CC                                  | 2.00        | 60-69           |  |
| DC                                  | 1.50        | 50-59           |  |
| DD                                  | 1.00        | 45-49           |  |
| FD                                  | 0.50        | 35-44           |  |
| FF                                  | 0.00        | 0-34            |  |

<u>Semester letter grades for the Graduate Students in the Scientific Preparation Program</u> are S (Satisfactory) and U (Unsatisfactory). For those students, the standard scales (i.e., catalog grading system described in Çankaya University regulations) are as follows:

| GRADUATE STUDENTS IN THE SCIENTIFIC PREPARATION PROGRAM |             |                       |  |
|---------------------------------------------------------|-------------|-----------------------|--|
| Letter grade                                            | Coefficient | Score Intervals       |  |
| S (Satisfactory)                                        | -           | 60-100 (CC and above) |  |
| U (Unsatisfactory)                                      | -           | 0-59                  |  |

The catalog grading system may not be considered if the instructor deems it necessary. Thus, different score intervals may be considered.

The Registrar's Office will announce semester letter grades.

Letter Grade NA: The occurrence of one of the cases below will lead to grade NA:

- Absence in both exams.
- · Absence in both exams but taking their make-up exams.
- Attendance for the whole semester is less than 50%, and the semester grade is below DD.

Also, note that students having the grade NA cannot use the Additional Exam Rights (Ek Sınav Hakları).

Course Evaluations: Çankaya University is committed to continuous improvement and seeks students' input through their participation in course evaluation. Your response will be processed so that, unless you wish otherwise, nobody will not be aware of your identity.

In addition to the end-of-semester evaluation, you may provide feedback at any time during the semester by writing (or typing) your comments on a small piece of paper without indicating your identity and sliding this paper under the door of the instructor's office.

Important Notes:

- 1. Please keep this course syllabus for future reference, as it contains essential information. It will also be available on the course and the department's website.
- 2. You are responsible for knowing any changes to this course syllabus announced in lectures or through the course's website during the semester.
- 3. If you have questions on the coursework, please always refer to this syllabus to obtain the answer yourself first. If the answer is in the syllabus, **please do not insist on asking your instructor the same question**.
